

Failover, Rural Wireless Broadband

Today, reliable and fast internet connectivity is critical to both business and consumer, but this is not always available by fixed line. There is the option to have a 4G/5G wireless connection to provide this, or to offer a failover/resilience function. This required a router device and an effective MiMo antenna. The Panorama Antennas WMM series is a high performance antenna system, that is easy to install with adaptable mounting and pre-fitted connectors, for 'plug & play' connection.
